

## Claims

1. Computer-based system for automated experience rating and/or loss reserving, a certain event  $P_{if}$  of an initial time interval  $i$  including development values  $P_{ikf}$  of the development intervals  $k=1, \dots, K$ ,  $K$  being the last known development interval with  $i=1, \dots, K$ , and all development values  $P_{1kf}$  being known, characterized

in that the system for automated determination of the development values  $P_{i,K+2-i,f}, \dots, P_{i,K,f}$  comprises at least one neural network, the system for determination of the development values  $P_{i,K+2-i,f}, \dots, P_{i,K,f}$  of an event  $P_{i,f(i-1)}$  comprising iteratively generated neural networks  $N_{ij}$  for each initial time interval  $i$  with  $j=1, \dots, (i-1)$ , and the neural network  $N_{i,j+1}$  depending recursively on the neural network  $N_{i,j}$ .

2. Computer-based system according to claim 1, characterized in that for the events the initial time interval corresponds to an initial year, and the development intervals correspond to development years.

3. Computer-based system according to one of the claims 1 or 2, characterized in that training values for weighting a particular neural network  $N_{ij}$  comprise the development values  $P_{p,q,f}$  with  $p=1, \dots, (i-1)$  and  $q=1, \dots, K-(i-j)$ .

4. Computer-based system according to one of the claims 1 to 3, characterized in that the neural networks  $N_{ij}$  for the same  $j$  are identical, the neural network  $N_{i+1,j=i}$  being generated for an initial time interval  $i+1$ , and all other neural networks  $N_{i+1,j<i}$  corresponding to networks of earlier initial time intervals.

5. Computer-based system according to one of the claims 1 to 4, characterized in that the system further comprises events  $P_{i,f}$  with initial time interval  $i < 1$ , all development values  $P_{i<1,k,f}$  being known for the events  $P_{i<1,f}$ .

AMENDED PAGE

6. Computer-based system according to one of the claims 1 to 5, characterized in that the system comprises at least one scaling factor by means of which the development values  $P_{ikf}$  of the different events  $P_{i,f}$  are scalable according to their initial time interval.

5 7. Computer-based method for automated experience rating and/or loss reserving, development values  $P_{ikf}$  with development intervals  $k=1, \dots, K$  being assigned to a certain event  $P_{i,f}$  of an initial time interval  $i$ ,  $K$  being the last known development interval with  $i=1, \dots, K$ , and all development values  $P_{1kf}$  being known for the events  $P_{1,f}$ , characterized

10 in that at least one neural network is used for determination of the development values  $P_{i,K+2-i,f}, \dots, P_{i,K,f}$ , neural networks  $N_{i,j}$  being generated iteratively  $(i-1)$  for each initial time interval  $i$  with  $j=1, \dots, (i-1)$ , for determination of the development values  $P_{i,K-(i-j)+1,f}$ , and the neural network  $N_{i,j+1}$  depending recursively on the neural network  $N_{i,j}$ .

15 8. Computer-based method according to claim 7, characterized in that for the events the initial time interval is assigned to the initial year, and the development intervals are assigned to development years.

9. Computer-based method according to one of the claims 7 or 8, characterized in that for weighting a particular neural network  $N_{i,j}$ , the  
20 development values  $P_{p,q,f}$  with  $p=1, \dots, (i-1)$  and  $q=1, \dots, K-(i-j)$  are used.

10. Computer-based method according to one of the claims 7 to 9, characterized in that the neural networks  $N_{i,j}$  for same  $j$  are trained identically, the neural network  $N_{i+1,j=i}$  being generated for an initial time interval  $i+1$ , and all other neural networks  $N_{i+1,j < i}$  of earlier initial time intervals being taken over.

25 11. Computer-based method according to one of the claims 7 to 10, characterized in that used in addition for determination are events  $P_{i,f}$  with initial time interval  $i < 1$ , all development values  $P_{i < 1,k,f}$  being known for the events  $P_{i < 1,f}$ .

**AMENDED PAGE**

12. Computer-based method according to one of the claims 7 to 11, characterized in that by means of at least one scaling factor the development values  $P_{ikf}$  of the different events  $P_{i,f}$  are scaled according to their initial time interval.

5 13. Computer-based method for automated experience rating and/or loss reserving, development values  $P_{i,k,f}$  with development intervals  $k=1,\dots,K$  being stored assigned to a certain event  $P_{i,f}$  of an initial time interval  $i$ , whereby  $i=1,\dots,K$  and  $K$  is the last known development interval, and whereby all development values  $P_{1,k,f}$  are known for the first initial time interval,  
10 characterized

in that, in a first step, for each initial time interval  $i=2,\dots,K$ , by means of iterations  $j=1,\dots,(i-1)$ , at each iteration  $j$ , a neural network  $N_{i,j}$  is generated with an input layer with  $K-(i-j)$  input segments and an output layer, each input segment comprising at least one input neuron and being assigned to a  
15 development value  $P_{i,k,f}$ ,

in that, in a second step, the neural network  $N_{i,j}$  is weighted with the available events  $P_{i,f}$  of all initial time intervals  $m=1,\dots,(i-1)$  by means of the development values  $P_{m,1..K-(i-j),f}$  as input and  $P_{m,1..K-(i-j)+1,f}$  as output, and

in that, in a third step, by means of the neural network  $N_{i,j}$  the output  
20 values  $O_{i,f}$  for all events  $P_{i,f}$  of the initial year  $i$  are determined, the output value  $O_{i,f}$  being assigned to the development value  $P_{i,K-(i-j)+1,f}$  of the event  $P_{i,f}$ , and the neural network  $N_{i,j}$  depending recursively on the neural network  $N_{i,j+1}$ .

14. Computer-based method according to claim 13, characterized in that for the events the initial time interval is assigned to an initial year, and the  
25 development intervals are assigned to development years.

15. System of neural networks, which neural networks  $N_i$  each comprise an input layer with at least one input segment and an output layer, the

**AMENDED PAGE**

input layer and output layer comprising a multiplicity of neurons which are connected to one another in a weighted way, characterized

in that the neural networks  $N_i$  are able to be generated iteratively using software and/or hardware by means of a data processing unit, a neural network  $N_{i+1}$  depending recursively on the neural network  $N_i$ , and each network  $N_{i+1}$  comprising in each case one input segment more than the network  $N_i$ ,

in that, beginning at the neural network  $N_1$ , each neural network  $N_i$  is trainable by means of a minimization module by minimizing a locally propagated error, and

in that the recursive system of neural networks is trainable by means of a minimization module by minimizing a globally propagated error based on the local error of the neural network  $N_i$ .

16. System of neural networks according to claim 15, characterized in that the output layer of the neural network  $N_i$  is connected to at least one input segment of the input layer of the neural network  $N_{i+1}$  in an assigned way.

17. Computer program product which comprises a computer-readable medium with computer program code means contained therein for control of one or more processors of a computer-based system for automated experience rating and/or loss reserving, development values  $P_{i,k,f}$  with development intervals  $k=1, \dots, K$  being stored assigned to a certain event  $P_{i,f}$  of an initial time interval  $i$ , whereby  $i=1, \dots, K$ , and  $K$  is the last known development interval, and all development values  $P_{1,k,f}$  being known for the first initial time interval  $i=1$ , characterized

in that by means of the computer program product at least one neural network is able to be generated using software and is usable for determination of the development values  $P_{i,K+2-i,f}, \dots, P_{i,K,f}$ , whereby, for

**AMENDED PAGE**

determination of the development values  $P_{i,K-(i-j)+1,f}$  neural networks  $N_{i,j}$  are able to be generated for each initial time interval  $i$  by means of the computer. program iteratively  $(i-1)$  with  $j=1,\dots,(i-1)$ , and whereby the neural network  $N_{i,j+1}$  depends recursively on the neural network  $N_{i,j}$ .

5           18. Computer program product according to claim 17, characterized in that for the events the initial time interval is assigned to an initial year, and the development intervals are assigned to development years.

10           19. Computer program product according to one of the claims 17 or 18, characterized in that for weighting a particular neural network  $N_{i,j}$  by means of the computer program product the development values  $P_{p,q,f}$  with  $p=1,\dots,(i-1)$  and  $q=1,\dots,K-(i-j)$  are readable from a database.

15           20. Computer program product according to one of the claims 17 to 19, characterized in that with the computer program product the neural networks  $N_{i,j}$  are trained identically for the same  $j$ , the neural network  $N_{i+1,j=i}$  being generated for an initial time interval  $i+1$  by means of the computer program product, and all other neural networks  $N_{i+1,j<i}$  of earlier initial intervals being taken over.

20           21. Computer program product according to one of the claims 17 to 20, characterized in that the database additionally comprises in a stored way events  $P_{i,f}$  with initial time interval  $i<1$ , all development values  $P_{i<1,k,f}$  being known for the events  $P_{i<1,f}$ .

25           22. Computer program product according to one of the claims 17 to 21, characterized in that the computer program product comprises at least one scaling factor by means of which the development values  $P_{ikf}$  of the different events  $P_{i,f}$  are scalable according to their initial time interval.

23. Computer program product which is loadable in the internal

**AMENDED PAGE**

memory of a digital computer and comprises software code segments with which the steps according to one of the claims 7 to 14 are able to be carried out when the product is running on a computer, the neural networks being able to be generated through software and/or hardware.
